Building Global Biobrand: Taking Biotechnology to Market Francoise Simon, Philip Kotler

From medicine and defense to food and cosmetics, biotechnological breakthroughs are creating huge new global market opportunities as well as unprecedented challenges. Companies from mega-pharmaceuticals to infotech giants and biotech start-ups must radically rethink their business models. In the first book on the business of biotechnology, Françoise Simon and Philip Kotler combine their biotechnology and marketing ex-pertise to show managers how to innovate with bionetworks, win customers with biobrand, and create sustainable advantage worldwide.

Simon and Kotler explain in clear nontechnical prose how innovation in the new biosector will be driven by a web of cross-industry collaborations, and in particular by three transforming forces: information technology, consumerism, and systems biology. With timely industry cases, the authors demonstrate that by capitalizing on these forces, companies from Hitachi and Siemens to Amgen and Pfizer could become the biotech leaders of the coming decades.

The chapters on building and sustaining biobrand are the centerpiece of this indispensable book. Simon and Kotler present a powerful framework that will enable any manager to redefine and transform traditional models into a new branding paradigm: the global "targeted" model as an alternative to the global "mass market" model. The authors illustrate how each of these models has proven successful in launching such blockbuster drugs as Viagra, Lipitor, Rituxan, and Gleevec.

Relevant to all industries impacted by biotechnology from consumer goods to industrial products, *Building Global Biobrand* is essential reading for every manager, marketer, analyst, and consultant who must understand the Biotech Century.
