LINUX in A Nutshell: A Desktop Quick Reference (3rd Edition) Ellen Siever, Stephen Spainhour, Jessica P. Hekman

Linux in a Nutshell covers the core commands available on common Linux distributions. This isn't a scaled-down quick reference of common commands, but a complete reference to all user, programming, administration, and networking commands with complete lists of options. Contents also include:

- LILO and Loadlin (boot) options
- Shell syntax and variables for the *bash*, *csh*, and *tcsh* shells
- Pattern matching
- Emacs and *vi* editing commands
- *sed* and *gawk* commands
- Common configuration tasks for the GNOME and KDE desktops and the fvwm2 window manager

New material in the third edition includes common configuration tasks for the GNOME and KDE desktops and the fvwm2 window manager, the *dpkg* Debian package manager, an expanded investigation of the *rpm* Red Hat package manager and CVS, and many new commands. *Linux in a Nutshell* is a must for any Linux user; it weighs less than a stack of manual pages, but delivers everything needed for common, day-to-day use. It also covers a wide range of GNU tools for Unix users who have GNU versions of standard Unix tools.
