Communications Services Via Satellite: A Handbook for Design, Installation and Service Engineers

Geoffrey E. Lewis

With the introduction of satellites, communications systems are now capable of carrying not only all existing services to previously inaccessible areas, but also new services which were not feasible before the advent of satellites. New technical problems have thus been created for the engineers involved in communications television services equipment. This book describes how the system signal is coded, modulated, demodulated and processed. Several actual systems are described, and a number of analyses and design rules are included.
