## **Hidden Data: The Blind Eye of Science** Helene Z Hill

In 1999, research scientist, Helene Hill, saw what she thought might be scientific misconduct – fabrication of experimental data – on the part of a scientist in the laboratory in which she worked. She reported it to the laboratory supervisor who was unconvinced so she let it pass. The spurious data were used to support a grant application to the National Cancer Institute which was subsequently funded. A year or so later, another scientist was added to the laboratory staff. This individual later expressed to Dr. Hill that he had similar suspicions about the first fellow. Hill, fortified by additional independent observations, reported her suspicions to the Campus Committee on Research Integrity. There then followed a long odyssey of failures. The Campus Committee thought that she and her co-worker were lying and turned her down. The Office of Research Integrity (ORI) of the US Public Health Service subsequently turned her down. She turned to the Federal Court, the judge said she was quixotic and turned her down. But now she had overwhelming evidence that experiments recorded in eight scientific publications and used to support government grants worth two and a half million dollars were extremely likely to have been fabricated. Trying again at the University and the ORI, she was turned away again. She appealed the judge's decision and failed again. Her only recourse was to write this book. It has been written to demonstrate to scientists, to law makers and to the public at large that the way our country deals with scientific misconduct simply does not work.

Miscreants who are caught get away with nothing more than a slap on the wrist. Scientists turn a blind eye when it comes to other scientists – many of whom are their friends and colleagues – who are falsifying data. Many scientists are too busy to care – until it happens to them. Millions of dollars are misspent every year. Only a few of the cheaters are caught and even fewer of those are punished. Journals fear challenges to published works lest they be sued. This book is a wake-up call. How could one individual have gotten away with so much untenable data? How can so many so-called reasonable scientists turn a blind eye? Much of it lies in knowing what is in it for them. Scientists need to get large research grants to get promoted, to get offers of better, more prestigious jobs, to win the admiration of their colleagues. They are the big shots and control the field. This book is a call for reform. If people on Wall Street go to jail for mismanaging other people's money, why shouldn't scientists who intentionally misuse public funds suffer the same punishment? If doctors, nurses, dentists, veterinarians are overseen and disciplined by state boards, why aren't research scientists subject to the same oversight? Why do we, the scientists, continued to let the fox, our fox, watch the hen house? Why are universities, medical facilities, research institutes not called to account when their scientists cheat? Shouldn't these organizations have to return the misspent funds and then some? Wake up, America! It is time for a new paradigm for truth in science!

### From reader reviews:

#### **Janice Oconnell:**

What do you ponder on book? It is just for students since they are still students or it for all people in the world, the particular best subject for that? Just simply you can be answered for that question above. Every person has diverse personality and hobby for each other. Don't to be obligated someone or something that they don't desire do that. You must know how great and also important the book Hidden Data: The Blind Eye of Science. All type of book are you able to see on many resources. You can look for the internet sources or other social media.

#### **Edris Sibert:**

This Hidden Data: The Blind Eye of Science are usually reliable for you who want to be described as a successful person, why. The reason why of this Hidden Data: The Blind Eye of Science can be one of many great books you must have will be giving you more than just simple studying food but feed you with information that might be will shock your before knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions in e-book and printed people. Beside that this Hidden Data: The Blind Eye of Science giving you an enormous of experience for example rich vocabulary, giving you tryout of critical thinking that we realize it useful in your day activity. So , let's have it appreciate reading.

#### **Andre Botsford:**

A lot of people always spent all their free time to vacation or go to the outside with them family members or their friend. Do you realize? Many a lot of people spent they free time just watching TV, or playing video games all day long. If you want to try to find a new activity that's look different you can read a book. It is really fun for you. If you enjoy the book you read you can spent 24 hours a day to reading a reserve. The book Hidden Data: The Blind Eye of Science it is extremely good to read. There are a lot of people that recommended this book. These were enjoying reading this book. Should you did not have enough space to create this book you can buy the e-book. You can m0ore easily to read this book from the smart phone. The price is not too expensive but this book offers high quality.

#### **Anne Young:**

Do you like reading a reserve? Confuse to looking for your favorite book? Or your book ended up being rare? Why so many query for the book? But just about any people feel that they enjoy for reading. Some people likes studying, not only science book but also novel and Hidden Data: The Blind Eye of Science or maybe others sources were given knowledge for you. After you know how the truly amazing a book, you feel need to read more and more. Science reserve was created for teacher or even students especially. Those guides are helping them to add their knowledge. In different case, beside science e-book, any other book likes Hidden Data: The Blind Eye of Science to make your spare time considerably more colorful. Many types of book like this.
