Mathematical Analysis II: 1 (Universitext)

Vladimir A. Zorich

Mathematical Analysis II: 1 (Universitext) Vladimir A. Zorich

This second

English edition of a very popular two-volume work presents a thorough first course in analysis, leading from real numbers to such advanced topics as differential forms on manifolds; asymptotic methods; Fourier, Laplace, and Legendre transforms; elliptic functions; and distributions. Especially notable in this course are the clearly expressed orientation toward the natural sciences and the informal exploration of the essence and the roots of the basic concepts and theorems of calculus. Clarity of exposition is matched by a wealth of instructive exercises, problems, and fresh applications to areas seldom touched on in textbooks on real analysis.

The main

difference between the second and first English editions is the addition of a series of appendices to each volume. There are six of them in the first volume and five in the second. The subjects of these appendices are diverse. They are meant to be useful to both students (in mathematics and physics) and teachers, who may be motivated by different goals. Some of the appendices are surveys, both prospective and retrospective. The final survey establishes important conceptual connections between analysis and other parts of mathematics.

This second volume

presents classical analysis in its current form as part of a unified mathematics. It shows how analysis interacts with other modern fields of mathematics such as algebra, differential geometry, differential equations, complex analysis, and functional analysis. This book provides a firm foundation for advanced work in any of these directions.

From reader reviews:

Thomas Jones:

As people who live in often the modest era should be up-date about what going on or information even knowledge to make these keep up with the era that is always change and move forward. Some of you maybe may update themselves by reading books. It is a good choice for you but the problems coming to anyone is you don't know what kind you should start with. This Mathematical Analysis II: 1 (Universitext) is our recommendation so you keep up with the world. Why, since this book serves what you want and need in this era.

Richard Nix:

The feeling that you get from Mathematical Analysis II: 1 (Universitext) may be the more deep you excavating the information that hide inside words the more you get serious about reading it. It does not mean that this book is hard to know but Mathematical Analysis II: 1 (Universitext) giving you joy feeling of reading. The article author conveys their point in particular way that can be understood through anyone who read the idea because the author of this e-book is well-known enough. This specific book also makes your vocabulary increase well. Therefore it is easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having this Mathematical Analysis II: 1 (Universitext) instantly.

Jose Lloyd:

A lot of people always spent all their free time to vacation or go to the outside with them loved ones or their friend. Were you aware? Many a lot of people spent they free time just watching TV, or perhaps playing video games all day long. If you wish to try to find a new activity honestly, that is look different you can read a new book. It is really fun for you personally. If you enjoy the book which you read you can spent the whole day to reading a publication. The book Mathematical Analysis II: 1 (Universitext) it is extremely good to read. There are a lot of people who recommended this book. These were enjoying reading this book. If you did not have enough space to bring this book you can buy the e-book. You can m0ore effortlessly to read this book through your smart phone. The price is not too expensive but this book offers high quality.

Rachel Cady:

What is your hobby? Have you heard that will question when you got pupils? We believe that that problem was given by teacher on their students. Many kinds of hobby, Every person has different hobby. So you know that little person like reading or as examining become their hobby. You have to know that reading is very important as well as book as to be the matter. Book is important thing to increase you knowledge, except your own teacher or lecturer. You get good news or update about something by book. Different categories of books that can you take to be your object. One of them is actually Mathematical Analysis II: 1 (Universitext).
